Part 3: Short Talk Questions

Listen to the following paragraph and answer the questions.

Unlike today, soda wasn't always readily available or easy to make. Back in the 18th century, people were interested in drinking natural mineral water. They believed the bubbly water was good for health. This is how the idea of soda came to be. Unfortunately, transporting hot spring water was pricey. Then, Joseph Priestley invented soda water in 1767. He discovered that gas was produced when acid was applied to chalk. By pumping the gas into water, bubbles were created. However, there was no way to produce soda water on a large scale. This all changed in 1832, when John Matthews developed a new process. (延伸自 12 Unit 8)

- (A) 9. What was the problem of spring water?

- (A) It was not easy to move around.
- (B) People lost interest in it very fast.
- (C) The minerals were bad for health.
- (D) It quickly lost its bubbles.

- (C) 10. What was **NOT** true about Joseph Priestley?

- (A) He created soda with chalk and acid.
- (B) He made a remarkable discovery.
- (C) He successfully pumped minerals into water.
- (D) He couldn't produce soda on a large scale.
