Part 3: Short Talk Questions *Listen to the following paragraphs and answer the questions.*

Paragraph A

Microsoft Japan tried a four-day workweek in August, 2019, and the results were eye-opening. Productivity during the month jumped 40 percent compared with the previous August, and the company also saw substantial cost savings. Those included a 23 percent decrease in electricity used and nearly 60 percent fewer pages printed. In addition, staff took 25 percent less time off. Not surprisingly, a majority of the roughly 2,300 employees involved—92 percent—liked the idea. Furthermore, the Microsoft division limited many meetings to 30 minutes, and encouraged online chats instead of face-to-face talks. One of the aims was to get employees to consider how they could be more productive in less time. Companies elsewhere in the world have trialed four-day workweeks as well. It's certainly an idea that will find fans among workers all over the world. (延伸自 9 Unit 1)

(C) 7. What is the result of the four-day workweek introduced by Microsoft Japan?

- (A) The company's monthly profit decreased.
- (B) The company ended up spending more money.
- (C) The company experienced significant savings in costs.
- (D) The company saw less cost savings than they had expected.

(A) 8. How did Microsoft's employees react to the four-day workweek?

- (A) Most of the employees favored it.
- (B) Employees became less productive.
- (C) Most employees took more time off as a result.
- (D) They thought working four days a week wasn't enough.

Paragraph B

A new AI-powered chatbot is drawing everyone's attention these days. Called ChatGPT, it has the special ability of producing language that closely mirrors human conversation. Developed with human feedback, ChatGPT can create coherent responses to almost any question, but some responses can contain incorrect information. The reason for this is that ChatGPT prioritizes producing strings of text that read like something written by a human, sometimes at the expense of accuracy. Unlike most other chatbots, ChatGPT can assist users with writing essays, analyzing text, and finding errors in computer code. Currently, ChatGPT is still a work in progress. Although the technology isn't perfect, ChatGPT may signal the next wave in AI-powered assistants. (延伸自 9 Unit 13)

(D) 9. What is one problem of ChatGPT, based on the passage?

- (A) Its responses do not read like human writing.
- (B) Its responses have grammar and spelling errors.
- (C) ChatGPT costs too much money to develop.
- (D) Its responses are not always accurate.

(B) 10. How is ChatGPT different from other chatbots?

- (A) ChatGPT never makes mistakes.
- (B) ChatGPT can study text carefully.
- (C) ChatGPT can learn by trial and error.
- (D) ChatGPT is not powered by AI.
